

Focus on your business— not on IT

HPE ProLiant EC200a Managed Hybrid Server

Get simple, scalable hybrid IT with a managed services model for ease of ownership and budget predictability

Making IT easy

Hewlett Packard Enterprise can help you deliver the advanced capabilities your users expect, with a hybrid IT solution built just for small to midsize businesses with one or more offices.

Part of the HPE Just Right IT portfolio

HPE Just Right IT helps small and midsize businesses achieve your business goals with simple, reliable, and affordable products, solutions, and services.

Your cloud, your way

Adopting some cloud services is a smart move that allows you to support your mobile workforce, scale IT resources on demand, reduce capital expenditures for new equipment, and simply respond better and faster to changing business requirements.

But security and privacy concerns, along with increased management complexity, may have you thinking twice about making the leap to the cloud.

The HPE ProLiant EC200a Managed Hybrid Server helps you accelerate your path to the cloud with confidence, by combining the flexibility and scalability of the cloud with the security and control of on-premises IT.

Cloud convenience, built with your needs in mind

The unique server design of the HPE ProLiant EC200a features tightly integrated compute, storage, and networking, together with Zynstra virtualization and cloud management software and is delivered as a managed service. It is deployed onsite and comes pre-integrated with cloud services and remote management from the cloud.

Designed with the needs of small to midsize businesses (SMBs) in mind, this solution features simple deployment and ease of management—all with a convenient subscription model for a predictable monthly fee.

Solution brief

Promote your remote office/branch office back to a first-class citizen.

If you are supporting IT for more than one office, you know the challenges of delivering IT to multiple sites:

- Too much physical infrastructure
- Inconsistent systems
- Poor service levels
- Time- and resource-intensive management

The HPE Managed Hybrid Server delivers the same level of service and security that the head office enjoys—on an IT infrastructure that can be managed remotely to minimize cost and maximize business continuity.

Enterprise-grade IT for one or more offices

The HPE ProLiant EC200a Managed Hybrid Server, together with Zynstra's unique virtualization and cloud management software, delivers enterprise-class functionality for one or more offices.

Hybrid IT: The best of both worlds

This solution gives you secure cloud enablement on your own terms. You choose which data and applications you keep onsite and which you put in the cloud. We take care of the rest.

IT-as-a-Service payment model

A pay-as-you-go subscription model means you pay a predictable monthly fee, giving you greater budget flexibility. And your on-premises hybrid IT is kept current and maintained 24x7—no more manual patching or updates for you. This helps reduce server admin by more than 90 percent.¹

Simple deployment

The HPE ProLiant EC200a comes in a unique design, unlike any server you've ever seen—it can even be mounted on your wall. The flexibility of the form factor reduces your hardware footprint and the complexity of on-premises IT. What's more, your entire core IT is pre-staged on the server before it arrives so it's easy to buy, use, and manage. The pre-staged hardware, software, and services can help you achieve total cost of ownership (TCO) savings of up to 60 percent compared to a traditional IT server infrastructure.²

Find out more

The flexibility of cloud with the control of on-premises IT is within your reach. Contact your authorized HPE sales representative for more details, today.
